

ROUND() is used to **round a decimal number to a specific number of decimal places**.

In your query:

```
ROUND(AVG(amount), 2)
```

It means:

- **AVG(amount)** → calculates the average payment.
- **2** → keeps **2 digits after the decimal point**.
- **ROUND()** → rounds the result to those 2 decimal places.

Example

Suppose the average payment is:

```
4.356789
```

Using:

```
ROUND(4.356789, 2)
```

Result:

```
4.36
```

Another example:

```
ROUND(10.124, 2)
```

Result:

```
10.12
```

```
ROUND(10.126, 2)
```

Result:

```
10.13
```

In your query

```
SELECT
    customer_id,
    ROUND(AVG(amount), 2) AS average_payment
FROM payment
GROUP BY customer_id;
```

Meaning: For each customer, calculate the average payment and display it with **only 2 decimal places**.

Remember: `ROUND(number, 2)` = round the number to **2 decimal places**.
